

Euro-BioImaging – access to the imaging community (not only) for industry

C Pfander¹

¹ Euro-BioImaging.

Abstract

Euro-BioImaging ERIC¹ as the pan-European Research Infrastructure for Imaging Technologies in Biological and Biomedical Science provides user access to more than 100 different high-end imaging technologies and image data analysis services at more than 170 facilities across 16 countries. Our infrastructure is open to industry collaborations with manufacturers, technology and software developers and imaging users alike.

Companies providing imaging instruments and products can join the Euro-BioImaging Industry Board (EBIB)², which has been provided a platform for exchange and collaboration with the imaging community since 2014. Through the Board, companies can access a large network of cutting-edge, trusted imaging facilities via a single entry-point, to gain insights into new trends and needs that reflect the feedback of a huge user community. This helps companies to improve existing and to develop new products for the market. At the same time companies can trust in the high quality of service at Euro-BioImaging facilities, presenting technologies at their best, and in finding the right expert for anything from informal consultations to training events or R&D collaborations.

Developers can get support to “field-test” their technologies through our established showcasing and proof-of-concept approach. Our network ensures access to relevant use cases for technology validation and can facilitate the rapid adoption across multiple facilities, moving from invention to true innovation.

Finally, Euro-BioImaging provides an extensive service offer for biotechnology and pharmaceutical companies, including small and medium enterprises, as the one-stop-shop for biological and biomedical imaging modalities. Companies can gain access to advanced technology services at trusted Nodes and receive confidential consultation by imaging experts in many areas of research, enabling industrial customers to have stability for long-term partnerships and flexibility to adjust projects as trends shift.

Strengthening imaging research in Europe

Members of the Euro-BioImaging Industry Board (Jan 2023).

Chair: Herbert Schaden, ZEISS Vice-Chair: Martin Tawinkel, Evident Coordinator: Claude Pfander, Euro-BioImaging
